

CASE STUDY: CHEMICALS AND LUBRICANTS

COMPANY:

PPG Industries Australia

PPG is a global supplier of paints, coatings, optical products, specialty materials, glass and fiberglass. Through leadership in innovation, sustainability and color, PPG helps customers in industrial, transportation, consumer products, and construction markets and aftermarkets to enhance more surfaces in more ways than any other company.

Their manufacturing, research and development facility in Victoria, Australia, produces automotive refinish, industrial coatings, packaging coatings, protective and marine coatings.

THE PROBLEM:

Safety risk from hazardous goods sliding off tynes or puncturing of containers.

PPG's facility supplies industrial, packaging, protective and marine coating to customers across Australia. These coatings are typically contained in metal and plastic drums and IBCs. Due to the large amount of products being moved throughout the facility, these drums and IBCs were occasionally slipping off forklift tynes or being punctured by forklift tynes. Spills of this nature were causing PPG loss of product and time and money to clean up the spills. In some cases, due to the toxic or hazardous nature of the coatings, the spill location would have to be quarantined until the location was completely cleaned and the hazardous material removed. It was recognised by PPG's management team that employees were also being exposed to potential harm from these spills.

THE SOLUTION:

GenieGrips® Mats offer superior grip.

PPG Industries in Clayton now use GenieGrips® Mats on their forklift tynes. The mats' compound rubber patterned surface provides over six times more grip than metal tynes. The square rubber tips of the GenieGrips® Mats protect against tynes puncturing the drums and IBCs containing PPGs coatings. This has eliminated spills and punctures of drums and IBCs from forklift tynes.

PPG are planning to roll out GenieGrips® Mats across all of their facilities in Australia and subsequently internationally.

Hans Casperzs – OH&S Officer
PPG Industries Clayton

"Using GenieGrips® Mats has stabilised the movement of IBCs on our forklifts and made stacking of IBCs easier. They have helped to eliminate IBCs sliding off forklift Tynes"
