

GenieGrips® Caps for protection against puncture and damage to goods from bare metal forklift tynes

When transporting drums of chemicals or lubricants, pallets of finished product or food and beverages, items may become punctured, pierced or damaged by unprotected metal forklift tynes. This can be particularly dangerous if moving chemicals or other hazardous substances. Finished products and their packaging can be scratched or damaged by bare metal tynes resulting in significant rework and loss of product.

GenieGrips® Caps function as protective covers that fix to the tips of the forklift tyne.

GenieGrips® Caps prevent the tyne from causing damage to your products during lifting, loading and placing of loads. They are easy to fit and remove and provide an effective, inexpensive way of minimising instances of damage to product.

GenieGrips® Caps are manufactured from bright, high visibility yellow compound rubber. They are easy to see during the day or night, ensuring safety to workers at all times. GenieGrips® Caps feature a reinforced steel frame for greater longevity and strength.

INDUSTRY APPLICATIONS

- Finished Goods
- Chemicals and Lubricants
- Food and Beverage
- Narrow Passages
- General Warehouse Storage

GENIEGRIPS® CAPS FUNCTION AS TIPS OF THE FORKLIFT TYNE

PROTECTIVE COVERS THAT FIX TO THE

KEY FEATURES

- Prevention of damage to goods
- Can be used as a safe bumper
- Non marking rubber compound
- Rubber compound can be used from -40°C to 110°C environments
- Reinforced steel frame
- Easily fitted and removed
- Bright visible yellow rubber for maximum safety

Slotted front allows Caps to slide onto forktyne
